

The *Four Minute* Report

Ask your patients... “Wouldn’t it be nice if we had a diagnostic test that would quantify your injury and show us exactly what your impairment is, rather than guess what your problem is based on your pain and symptoms? (Yes)... Come with me, I’ll show you.”

After the 4 Minute Report... your patients will close themselves.

After the 4 Minute Report... your patients will ask, “What do I have to do?”

**“In just 4 minutes, this report will solve...
the 4 most critical problems in every practice...
regardless of your provider discipline.”**

1. **Acceptance** - Never accept the patient until the patient accepts you.

With the 4 Minute Report, they will accept you and your recommendations. They will understand their functional impairment because they will see the AMA compliant test results on the report.

2. **Documentation** – Your denied claims will vanish with the 4 Minute Report... **and you will get PAID!**

Claims are denied because the providers fail to properly document **Medical Necessity and Outcome Assessment.**

The 4 Minute Report properly documents **Medical Necessity and Outcome Assessment** by definition.

And... All test results are compliant with current AMA Permanent Impairment Guidelines.

3. **Patient Retention** – Your patients will precisely follow your recommendations because they will be anxious to quantify their physical improvement and see their **Outcome Assessment report.**
4. **Reimbursement** – With the Functional Diagnostix, Inc. Medical Necessity and Outcome Assessment reports your claims will qualify for insurance reimbursement and they will be processed for payment. **This can increase your bottom line by 30%, or more.**
